

Black Tissue - FG BT

Fiberglass Black Tissue is a black non-woven felt made of randomly oriented glass fibers distributed in a special binder by a wet-lay process.

(Black color tissue not pictured)

Applications

- Used as facing for all types of insulations - fiberglass wool, mineral wool, polyurethane foam slabs, expanded polystyrene slabs and phenolic foam slabs.

Benefits

- Minimises fiber fall-out from insulation materials in various applications.
- Improves finish quality and look and eases handling of insulation material.
- Particularly suitable for internal building applications where external surface of insulation is visible.

Technical Data

- Nominal Mass 60 g/m² (1.74 oz/sq yd)
- Nominal Thickness 0.50mm (0.019 inch)
- Fire Rating Class 1
- Standard width 1.2 meters (4 ft)
- Standard Roll Length 300 meters (984 ft).
