

## Corrugated Sheet Roving

Corrugated Sheet Rovings, also known as Panel Rovings, are used in the continuous molding process to make corrugated semi-translucent and translucent roof sheets or panels.

Properties	Specifications
<ul style="list-style-type: none"> <li>✓ Low strand tex</li> <li>✓ Excellent splitting efficiency</li> <li>✓ Easy unwinding and chopping</li> <li>✓ Fast wet-out and impregnation</li> <li>✓ High affinity with polyester resin</li> </ul>	<ul style="list-style-type: none"> <li>• E-Glass</li> <li>• Filament diameter 11 microns</li> <li>• 2400 tex (yields 207 yds/lb)</li> <li>• Finish - silane</li> <li>• Loss on ignition(%): 0.55+/-0.2</li> <li>• Tex variety(%): &lt;=5</li> <li>• Moisture content(%): &lt;=0.15</li> <li>• Stiffness (MM): 110+/-20</li> <li>• Splitting efficiency(%): &gt;=75</li> <li>• Finish - silane</li> <li>• Compatible resine - polyester</li> <li>• Weight per ball 17 kg (37 lbs)</li> <li>• About 19 tonnes (41,895 lbs) per 20ft container</li> </ul>
